

Figure 6. The effect of the number of iterations on the performance of the proposed algorithm. The figure shows two plots side-by-side. The left plot shows the 'Number of iterations' on the x-axis (ranging from 0 to 100) and 'Performance' on the y-axis (ranging from 0 to 1). The right plot shows the 'Number of iterations' on the x-axis (ranging from 0 to 100) and 'Performance' on the y-axis (ranging from 0 to 1).

1. *Chlorophyll a* (Chl *a*) is the primary photosynthetic pigment in most plants and algae. It is a green pigment that absorbs light energy in the blue and red regions of the visible spectrum.

Figure 1: Schematic representation of the experimental design. The diagram illustrates a sequence of events for each trial. It starts with a 'Stimulus' (a word), followed by a 'Response' (a word), and then a 'Feedback' (a word). The sequence is repeated for multiple trials. The words used in the stimulus, response, and feedback sections are: cat, dog, bird, fish, insect, mammal, reptile, amphibian, mollusk, arthropod, cnidarian, echinoderm, annelid, mollusk, arthropod, cnidarian, echinoderm, annelid.

The chemical structure shows a complex polycyclic system, possibly a steroid or a similar natural product. It features a central ring system with several fused and fused rings. There are various functional groups attached, including hydroxyl groups, carbonyl groups, and a complex side chain. The structure is highly detailed, showing the connectivity of atoms and the presence of multiple stereocenters.
